# WILSON WINDOW GUARD

Patented Oct. 25, 1910

The only Burglar-Proof Window Guard that can be put up at night and taken down in the morning.

Adapted for Bungalows, Ground-floor Sleeping Rooms, Porch Windows, Up-stair Flats and Apartment Windows, Hospital and Office Buildings.

## DIAMOND WIRE AND IRON WORKS

516 NORTH CAPITOL AVE.

INDIANAPOLIS : INDIANA

PHONES:

MAIN 223

NEW 502

IN  
PLACE

REMOVED

The Window Guards as shown by cut is an entirely new invention. The bars can be put in and taken out in a moment, but **have to be unlocked** to do so. The cut shows Guard in place and other being removed.

When bars are down nothing is shown from outside or inside to mar the view. The rods are made of  $\frac{5}{8}$  cold rolled steel and the sides are flat steel. They are regularly finished oxidized, Japanned or unpolished steel. Full nickel plate \$1.50 extra. Windows with Guards can be left open at all times giving a healthy, sanitary condition at the same time perfect security against Burglars or children falling out.

The Guards are attached to inside frames of Windows and do not interfere with draperies or working of the windows. They can be put in place by any one who can use a screw driver. When in place, the screws which hold them are entirely covered and **can not be taken out by Any One** until the Guard is unlocked. Give us size of your windows and number required and get our price.

# Hospital Needs

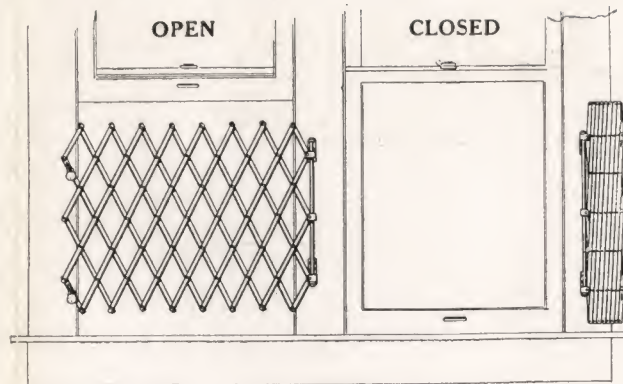

## WILSON'S WINDOW GUARD

When you have a friend or relative at a Hospital, you want to know that they are safeguarded in every possible way.

Patients become delirious from fear, fever, etc., and they must be protected. It is a common occurrence to read of some patient either falling or jumping out of Sanatorium or Hospital windows. By using our Guards you protect your patients from such accidents.

### DIRECTIONS FOR MEASURING

In measuring for Guards, get the exact measurement from stop to stop, or casing to casing, as the case may be, then measure from the window sill to the top of the first sash. Should you wish the entire window covered, measure the top sash in the same manner. In that case it would take two Guards, one for lower and one for upper sash.

The DIAMOND Folding Window Guard is made of 3-4 in. wide by 3-16 in. thick steel. It is attached to the inside of the window frame as shown above.

It can be adjusted to any size window.

They are also useful at stair landings and porch entrances to protect a baby from falling.

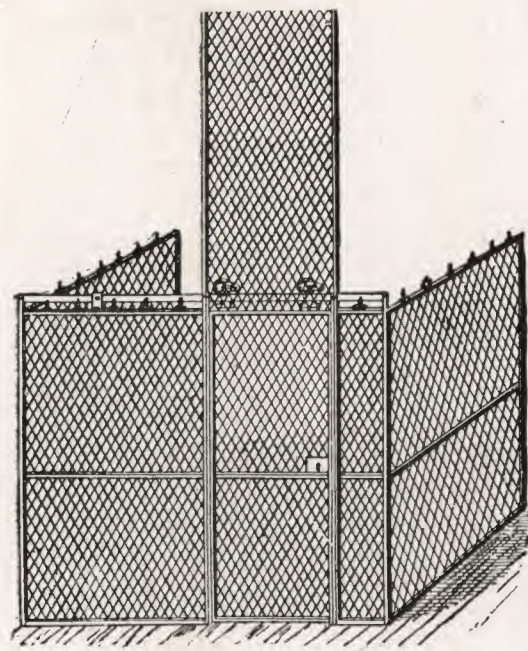

These are furnished in black, aluminum or bronze finish.

In ordering, if your lower sash measures 34 in. or under, order size No. 1.

If it measures over 34 in., order size No. 2.

If it measures over 42 in., order size No. 3.

**PRICE EACH**

We also manufacture any size, shape, and weight of round or flat wire Window Guards, Sky-light Guards, Elevator Enclosures, Office Railings, Wire Trellises, etc.
